

Wrestling Mats with Microban® Antimicrobial Product Protection.

Some common questions about Microban® Protection:

What is Microban® Protection ?

Microban protection is built-in antimicrobial protection that gives products an added level of protection against microbes such as bacteria, mold, and mildew that cause stains and odors and can lead to product deterioration.

What are the benefits of Resilite™ mats with Microban Protection?

Microban continuously fights the growth of microbes such as bacteria, mold and mildew that cause stains, odors and product degradation. By continuously fighting these microbes, Microban technology makes the mat easier to keep clean and reduces odors between cleanings.

How long does Microban Protection last?

Microban protection is added during the manufacturing process and will not wash off or wear away. Microban protection is engineered to provide continuous antimicrobial protection for the useful life of the wrestling mat.

What type of microorganisms does Microban protection work against?

Microban antimicrobial protection is effective against most common bacteria, yeasts, molds and fungi that cause stains and odors. Microban protection is not designed to protect users from disease-causing microorganisms. Proper maintenance, care and cleaning of the wrestling mat must still be performed on a regular basis.

Does Microban protection work immediately?

Microban antimicrobial protection begins to work as soon as the microorganism comes into contact with the product surface. It then works continuously to maintain a consistently lower bio-burden than on a product without Microban protection. Microban is NOT a disinfectant, normal cleaning practices should be maintained.

Can I have Microban protection added to my existing mat?

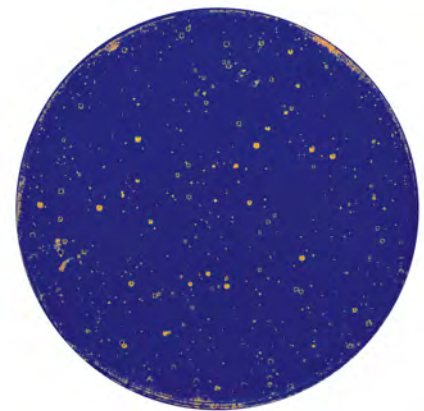

Microban protection can be added to any existing mat during our Reconditioning process. During our reconditioning process, Resilite can apply a new vinyl coating with Microban protection. Reconditioned mats with Microban protection are easier to keep clean and reduces odors between cleanings.

Resilite® Wrestling Mats with Exclusive Microban® Antimicrobial Product Protection

- Only Resilite® Wrestling Mats are available with built-in Microban® antimicrobial product protection.
- Microban® antimicrobial protection is infused into both sides of the mat during the manufacturing process to provide continuous antimicrobial protection against bacteria, mold and mildew that can cause stains, odors and deterioration of the mat.
- On an untreated surface, microbes can double in number every 20 minutes. In a 24 hour laboratory test, the samples to the right were both inoculated with bacteria and then photographed after 24 hours. The top sample was manufactured with built-in Microban technology and the bottom sample was untreated.*
- Microban protection works 24/7 and won't wash off or wear away for protection that lasts the lifetime of the mat.
- Microban technology is not a substitute for normal cleaning, Microban technology keeps mats cleaner between regular cleanings.
- Microban technology is approved by the EPA for use in wrestling mats and has a long history of safe and effective use.

With Microban® Protection

Untreated

*This information is based upon standard laboratory tests and is provided for comparative purposes to substantiate antimicrobial activity for non-public health applications. Microban technology is not designed to protect users from disease causing microorganisms. Microban protection inhibits the growth of microorganisms that cause stains, odors, and product degradation. Antimicrobial action limited to product surface.

Microban® Antimicrobial Protection versus Disinfectants

Disinfectants

Disinfectants can be sprayed or wiped on a surface and can kill 99% of bacteria on the surface of a product in less than 10 minutes. However, disinfectants quickly dissipate off the surface and provide limited on-going protection against microbes.

Built-in Antimicrobials

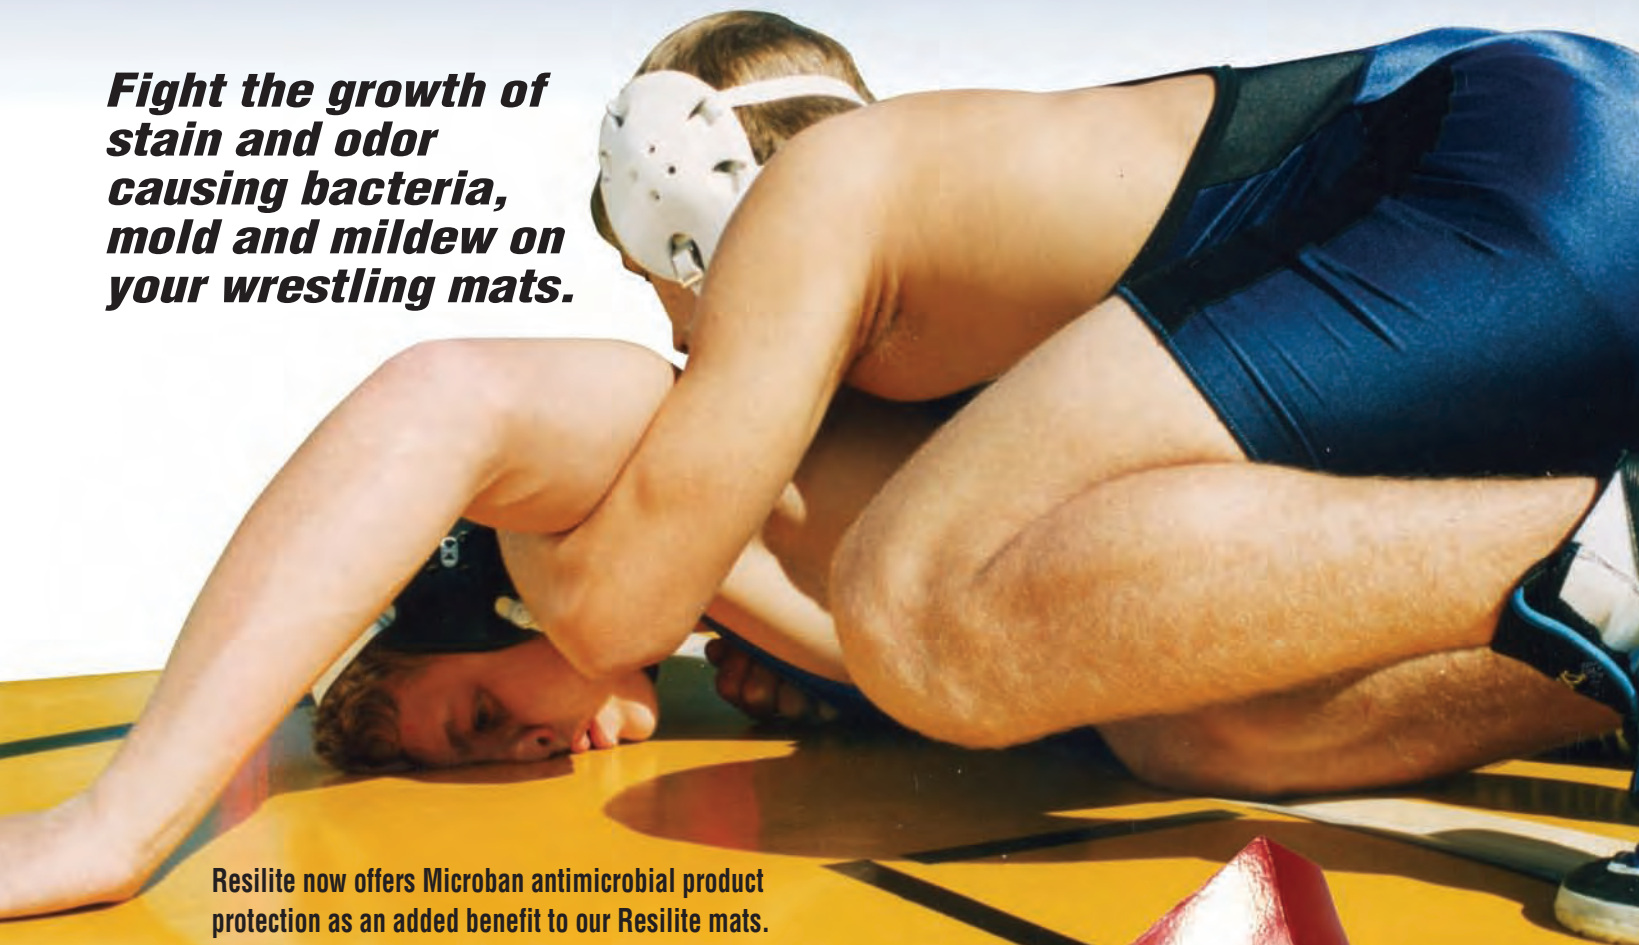

Unlike disinfectants, built-in antimicrobials do not provide an instant reduction in bacteria, but instead work continuously to inhibit the growth of microbes that can cause stains, odors and product deterioration. Microban antimicrobial technology is a good adjunct to disinfectants because it provides 24/7 protection that can keep the mat cleaner between regular cleanings. On an unprotected surface, microbes can double in number every 20 minutes.

Microban
antimicrobial product protection

Takedown Microbes ...from top to bottom!

Fight the growth of stain and odor causing bacteria, mold and mildew on your wrestling mats.

Resilite now offers Microban antimicrobial product protection as an added benefit to our Resilite mats. Microban protection is engineered to continuously provide antimicrobial protection for the useful life of the wrestling mat. And since every Resilite mat is two-sided, you get the extra assurance that even the underside of your mat is protected with Microban technology; making the mat easier to clean and reducing odors between cleanings.

Did You Know...
On an unprotected mat surface, microbes can double in number every 20 minutes. Microban protection works 24/7 to keep Resilite mats cleaner between cleanings for the lifetime of the mat.
